ABOUT ME

As a trained Application Developer EFZ, I bring two years of experience in application development and client-focused work. Due to my empathic nature, it is easy for me to react focused and flexible to client needs. I have worked in various projects as a project member or as a project coordinator. In addition, I also worked as a 3rd level supporter and performed coordinative activities, in which I was able to prove my versatility.

Due to my quick perception and my will to develop myself further, I am able to acquire the necessary know-how about new frameworks within a very short time.

My expertise

- Two years of experience in front and backend projects
- Development in JavaScript and PHP, as well as experience in React and Bootstrap
- Management and further development of Laravel web applications
- Fluent in written and spoken German

CV EREN ÜSTÜN
